FYI, the report on dredging (Buffalo Marine) in the San Jacinto River about ¾ mile NW of the waste pits; and the latest update from the Corps of Engineers about this.

Subject: Fwd: Dredging the river shoreline

Good evening,

I relayed information to Gary this morning about dredging that is occurring along the San Jacinto River, northwest of the Waste Pits. The attached map and photos were submitted to me from a resident living nearby. For an additional reference, the ponds on the left side of the attached map/photo are Meadowbrook Park.

From what I've been told, the company dredging is Buffalo Marine and is owned by Paul Holt. The dredging is taking place to build a bulk head and store barges. The material pictured on the bank of the River was removed from the River bed by a small piece of dredging equipment and the operations are said to be expanding soon and larger equipment is being moved in.

I cc'd Rock Owens and Bob Allen to keep our local agencies in the loop!

Thank you,
Jackie Young
